ABSTRACT

This Kids Count report examines state, county, and regional trends in the well-being of Colorado's children. The first part of the report is presented in four chapters. Chapter 1 includes findings regarding the increasing diversity of the child population, linguistic isolation, the impact of parental unemployment, child poverty, and the affordable housing challenge. Chapter 2 concerns vulnerable families, and presents findings regarding teen parents, declines in the teen birth rate, parents with low educational attainment, single-parent families, at-risk births, child abuse and neglect, out-of-home placements, and children of incarcerated parents. Chapter 3 highlights learning and education, and discusses the importance of early learning, the value of high-quality early care, program funding, school readiness, elementary and middle school student achievement, and outcomes of higher education. Chapter 4 focuses on child health and reports findings on health insurance, Medicaid enrollment, the state child health insurance program, maternal and child health indicators, mental health, oral health, asthma, obesity, chronic health conditions, and immunizations. The report next describes the It's About Kids project to stimulate dialogue of children's issues through a diverse child advocacy network. The remainder of the report then presents comparative state and regional data for the year 2001 for the following indicators: (1) demographics; (2) single parent families; (3) births to single women; (4) births to mothers lacking a high school diploma; (5) teen births; (6) repeat teen births; (7) three risk factor births (mothers under 25 years, unmarried, with less than 12 years of education); (8) out-of-home placements; (9) children enrolled in TANF; (10) children under 5 years receiving WIC; (11) children qualifying for free/reduced lunch; (12) median household income; (13) child poverty; (14) children under 6 with all parents in labor force; (15) low birth weight births; (16) early prenatal care; (17) women smoking during pregnancy; (18) infant mortality; (19) child deaths; (20) teen deaths; (21) children enrolled

in Medicaid; (22) children enrolled in state health plan; (23) high school graduates; (24) high school dropouts; (25) teen dropouts; and (26) idle teens. The report concludes with data notes and definitions. (KB)

Changing Times

Census 2000 data show Colorado in happier, healthier times. From 1990 until 2000, child poverty declined, as did the proportion of children living in high-poverty neighborhoods. The unemployment rate on Census Day, April 1, 2000, was 2.6%. At the end of 2002, the rate was 5.5%. The current fiscal turnoil has left many Colorado families struggling to make ends meet.

Worker age, gender, marital status and presence of children all affect the economic security of families. In 2002, the minimum wage was \$5.15 an hour, an annual income of \$10,712 (based on full-time, year-round employment). At this rate, a single parent working full-time with one child could not earn enough to keep the family above the federal poverty line or afford basic expenses.

Child poverty is troubling. When compared to more affluent children, poor children are more likely to demonstrate low academic achievement, drop out of school, become teen parents and have health, behavioral and emotional problems, and, as adults, earn less and be unemployed more frequently. A family lives in poverty if the combined income of all family members is less than the federal poverty level (FPL). In 2001, a family of four was below the FPL if their annual income was less than \$18,566. Most public programs set eligibility at a multiple of the FPL. For example, public school children quality for free lunches if their family income is less than 130% of the FPL.

200% of Poverty \$24,414 \$28,510 \$37,132 Federal Poverty Thresholds, 2001 Annual Income 130% of Poverty \$15,865 \$24,136 \$18,532 **Poverty Threshold** \$14,255 \$18,566 \$12,207 Household 2 persons 3 persons persons

Poverty holds the greatest risks for children experiencing poverty when they are very young or for children who experience long-lasting and deep poverty. In addition, low-income women experience clinical depression at rates twice as high as other women, with more than 40 percent reporting depressive symptoms. A child's literacy skills and language acquisition are influenced by the poverty status of the family as well as the mother's educational attainment.

Literacy School Readiness Skills* by Family Poverty Status: US, 1999

56,586 are Hispanic, 46,752 are White, and the rest are of another race. In 2000, 121,614 Colorado children under age 18 were poor. Of these,

Family economic security is the family's ability to meet its financial needs in a way that promotes the health and well-being of parents and children. Components of this include:

- Stable and predictable income
- Savings, assets and other forms of wealth
- Human and social capital education, skills, social support network ΔΔΔ

supplements show positive effects on children. It is important to note that it is not simply the amount of income that matters for children, but the stability of that income. A stable, adequate family income allows access to high-quality Programs that increase family income through employment and earnings early learning, health care and recreational opportunities for children. Employed parents may find themselves burdened with more health care costs to their employees. As a result, many workers are now paying more for their premiums from 2001 to 2002 and employers are passing some of this cost on than before. Employers report a 12.7 percent increase in health insurance nealth insurance, if they are covered by health insurance at all.

Gone when it is Most Needed Earned Income Tax Credit

soverty than any other government program by reducing the income tax 225,000 families and individuals in Colorado received the federal EITC in The federal Earned Income Tax Credit (EITC) lifts more children out of iability of working families with annual incomes up to \$32,000. Over

state ETTC program. With our refundable ETTC, the family receives a check if the size of the ETTC exceeds its tax bill. However, Colorado's state ETTC Colorado is one of only eleven states that have established a refundable refund is contingent on state revenues. Currently, the credit will be suspended in tax year 2002 and 2003 due to fiscal shortfalls.

Colorado's Affordable Housing Challenge

Colorado housing prices are out of step with wages, and Colorado is one of faster than wages or personal income in the last decade. In the last decade: the least affordable states for rental housing. The cost of housing has risen

- Average rent increased 103 percent.
- Price of single family homes increased 131 percent. Δ
 - Wages grew by 71 percent.
- By 2001, a minimum wage earner (\$5.15 per hour) could afford monthly rent of no more than \$268 ΔΔ
- A minimum wage earner would have to work 124 hours per week in order to afford a two-bedroom apartment at fair market rent in Denver. Δ

-ack of Affordable Housing Endangers Children's Health

nousing can expose children to hazardous conditions, such as deteriorating nealth. One in seven houses in Colorado was built before 1940, and many amilies do not have the resources to afford needed repairs. Substandard Overcrowded, costly or substandard housing negatively affects children's illnesses. If families become homeless, their children's health problems ead paint or unsanitary rodents and insects, which can lead to serious ncrease exponentially.

Overcrowded living conditions are taxing on every family member, making infections, aggravating asthma and causing children to fall behind in school privacy impossible. Sadly, children pay an even higher price. The Boston Frequently, families are forced to double-up to lower the cost of housing, Medical Center found that crowded homes can increase respiratory due to illness-related absences.

High housing costs and frequent moves also affect children academically. ack of Affordable Housing Hinders Children's School Performance

Three Risk Factor Births

In 2001, 5,400 babies were born to Colorado women who were under 25 years of age, unmarried and had less than 12 years of education. Children born to mothers with these three characteristics are at greater risk for a number of negative outcomes.

These characteristics are risk factors – markers of vulnerability – for poverty and its consequences. Children born to three risk factor mothers are more likely to drop out of school, give birth out of wedlock, to divorce or separate, and to be dependent on welfare.

- ▷ In 2001, 8.1 percent of all births to Colorado residents were to a three risk factor mother. This number has remained virtually unchanged over the past decade.
- The incidence of three risk factor births varies significantly by race and ethnicity.

Three Risk Factor Births by Race: CO, 2001

Source: Colorado Department of Public Health & Environment

Of Colorado families headed by a female, only 35% received child support or alimony payments in 1997 through 1999, which was comparable to families nationally.

Grandparents as Caregivers

An emerging trend in Colorado and throughout the nation is grandparents living with their grandchildren. For many of these children, their parents are unable or unwilling to care for them due to substance abuse, economic hardship, domestic violence, illness and death, divorce or other crises.

- Nearly 67,000 grandparents lived with their grandchildren in Colorado in 2000.
 In 42.6 percent of these households, grandparents were financially
 - responsible for their grandchild's care.

 Of these grandparents, more than one-third have been caring for their grandchildren for five or more years.

Abuse and Neglect

Sometimes family systems break down, and children are harmed or threatened with harm from abuse or neglect by a parent or legal guardian. Child maltreatment occurs in every part of Colorado, in cities, suburbs, small towns and rural areas. Child abuse and neglect make no distinction in income or ethnic origin.

Neglect can be as damaging to children as outright physical, sexual and emotional abuse, and neglect is far more common than abuse. Abused or neglected children are more likely to be socially withdrawn, be physically aggressive and have learning problems. Neglect is the most often-cited type of maltreatment.

Early Learning

Parents are the most important people in a child's development. The Colorado Children's Campaign has written extensively in past KidsCount! reports about the many ways parents stimulate and nurture their child's development.

This chapter focuses on the influences and activities that promote success in school. How adults respond to children and the activities in which young children engage are all part of the learning that prepares them for K-12 education. For example, exposing young children to books helps them understand that pictures and symbols relate to letters and words and that words make sentences, and that those same letters can spell their name. This exposure supports language development and early literacy.

and Colorado needs children who are

very child needs a solid education,

well-educated. Most children start kindergarten

Colorado Children's Campaign

But too many kids see those hopes dim as they

and first grade with big smiles and high hopes.

slip farther and farther behind their classmates.

Many factors influence the core components of a child's readiness to succeed in school. High-quality early care and education programs have been shown to have a positive influence on the development of children, especially children in poverty. Children's cognitive and social-emotional development, their physical health and their eagemess to learn are built on a foundation of good parenting and early childhood experiences that promote learning. In addition, parents in most families with young children in Colorado work, thus the child care system plays a major role in the development and school-readiness of children.

"Education is the food that nourishes the nation's soul."

- Bob Herbert, New York Times, March 6, 2003

₹

Extreme poverty, family turmoil and a lack of

quality early learning experiences are only three

of the factors that cause too many capable

children to start behind and stay behind. The

social costs of failure – in both human and

financial terms – seem insurmountable.

Education is the surest way out of poverty.

The Value of High-Quality Early Care

finish high school and less likely to be held back a grade, drop out of school children who attended Chicago's Child-Parent Centers were more likely to prepares children to succeed. The carefully controlled Abecedarian study Through research we know that high-quality child care is educational and showed that intervention for low-income children in a high-quality setting resulted in higher IQ scores, improved language, delayed parenthood and more. Recently, a 16-year longitudinal study found that disadvantaged or get arrested. A seven-year study conducted by the National Institute of Child Health and Human Development reported that high-quality care is related to:

- Better mother-child relationships
- Lower probability of insecure attachment in infants
- Fewer reports of problem behaviors Δ Δ
 - Higher cognitive performance ΔΔΔ

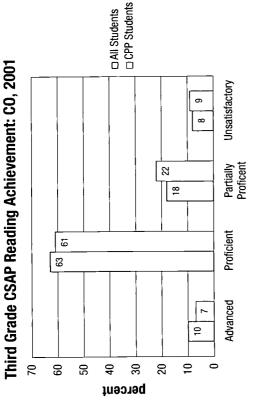

W.

- Higher language ability
- Higher level of school-readiness

in Colorado, the Colorado Preschool Program (CPP) serves 3, 4 and 5 yearold children who are at risk of educational failure because they come from low-income families, abusive families, homeless families or families with other risk factors.

CPP helps close the achievement gap. When some of Colorado's most lisadvantaged children were provided a high-quality early education experience in the CPP:

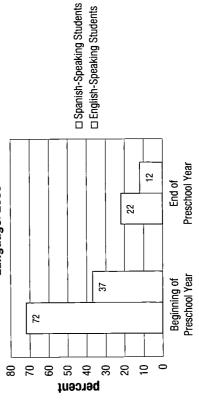

- They performed at a level similar to classmates who do not have these risk factors. Δ
- Spanish-speaking children realized a 69% improvement in their inguistic skills. Δ

Failure to obtain a high school diploma has consequences for both students and soverty. Since maternal education and income correleate with child well-being, heir future children. In Colorado, 20% of babies are born to women without a high school diploma. The table above shows that these women will likely earn soverty-level wages. Twenty-six percent of female-headed families are in he challenges these young families face will be great

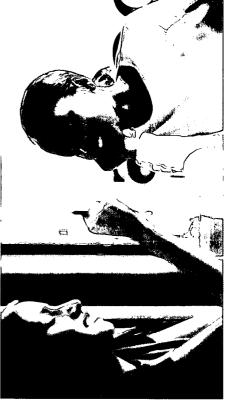

Colorado faces serious challenges because:

 \triangleright Colorado ranked 44th worst of the 50 states in the percentage of teens that are high school dropouts in 2000.

Source: Alliance for Excellent Education

Blacks based on level of education, these gaps become less pronounced as who have graduated from high school compared with those who haven't. Jnemployment rates are nearly double among those in each racial group Although gaps still persist between Whites compared with Hispanics and educational attainment rises.

Colorado Children's Campaign

ය ග

A Call for High School Reform, released by the Colorado Children's Campaign in March 2003, shows the problem is much worse than we # previously thought. An examination of Colorado's Class of 2001 shows:

- ➤ The cumulative total of reported dropouts of the Class of 2001 is nearly 15%, or approximately 10,000 students.
- accounted for in the dropout statistics for the Class of 2001. (For An estimated 17,791 students did not graduate and are not more information see www. coloradokids.org) Δ

Challenges for Schools: Teaching and Funding

A significant proportion of Colorado's high school teachers are teaching high-poverty and high-minority schools. Teachers in these high-poverty schools with large concentrations of minority students turn over often outside of their area of expertise - this is especially true of teachers in due to the high stress of their jobs and accountability pressures.

- Colorado spends \$587 less per student in the lowest-poverty school districts in the state compared to students in the highest-poverty districts.
- So, for a Colorado classroom of 25 students, that might translate into a difference of \$14,675 or for a school of 400 students, \$234,800. Δ

Oral Realth

Pooth decay (dental cavities or caries) is the single most common chronic disease among children ages 5 to 17 – five times more prevalent than asthma. Good oral health is critical to maintaining the general health, well-being and development of every child.

ഡ ഡ

Source: Colorado Department of Public Health & Environment

- ▷ Hispanic and Black third-graders are less likely to have dental sealants and are more likely to need urgent dental care than their White peers.
- > 80 percent of tooth decay is found in just 25 percent of children, most of whom are from low-income and minority families.
 - More than half of all children have cavities by the second grade.
 More than half of all children have cavities by the second grade.
- ➤ More than one-third of Hispanic third-graders in Colorado have untreated tooth decay, compared with one-fourth of all Colorado third graders.
- Preschool children with untreated cavities are likely to develop poor eating habits and speech problems.
 - Children whose mouths hurt too much to eat may experience malnutrition and stunted growth.
- ➤ Across the nation, approximately 52 million school hours, nearly 850,000 school days, are missed every year because of dental problems.
- In 2001, only 21.8% of Colorado's Medicaid-eligible children received dental care.
- ➤ Medicaid-eligible children who live in areas with unfluoridated water are three times more likely to receive dental treatment in a hospital operating room, at approximately twice the cost per child, than Medicaid-eligible children who live in areas with fluoridated water systems

The major reason for not obtaining dental services is financial. The CHP+ program recently implemented a dental benefit to address the growing need for dental services by low-income children.

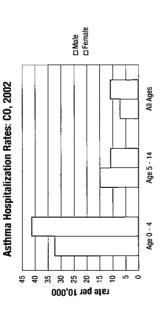

Despite recent efforts to improve access to dental care, this continues to be a serious statewide problem for children enrolled in Medicaid and CHP+.

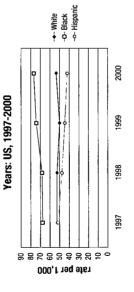

- ▷ In Medicaid, approximately 75% of eligible children do not see a dentist - in part due to the limited participation of dentists.
- ➤ Many dentists choose not to participate in Medicaid, primarily due to low reimbursement rates and the non-compliance of patients keeping appointments.

Asthma, one of the most common chronic health conditions of childhood, causes recurrent episodes of loss of breath and lung spasms that, if not controlled, can be fatal.

.

- Asthma rates have nearly doubled in the United States during the past two decades.
- Asthma currently affects over five million children under the age of 18 nationally.
- > Young children under age five are nearly three times as likely to be hospitalized for asthma than the general population.

Asthma Attack Prevalence in Children Under 18

Sources: Pediatrics, August 2002

Asthma can be triggered by environmental factors such as particles in the air, cigarette smoke, animal dander, cold air, exercise and dust mites. Children who live in neighborhoods with poor air quality or homes with smokers or unclean conditions are at increased risk for triggering this serious health condition.

Sources: Pediatrics, August 2002

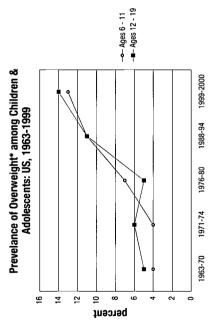

Asthma is also one of the leading causes of school absenteeism, accounting for over 10 million missed school days per year nationally. The estimated cost of asthma to the national economy was a staggering \$11.3 billion in 1998.

Racial and economic disparities are apparent in the number of both hospital and emergency room visits attributable to asthma, as well as deaths from asthma. Black children in low-income neighborhoods have shown the highest increase in rates of asthma in recent years. For these children, indoor and outdoor air pollution is widespread, and they may not be receiving adequate medical care.

- Black children are more likely than White or Hispanic children to suffer an asthma attack.
- Emergency room and hospitalization rates for asthma are much higher for Black children than for White children.
- Black children are five times more likely to die from asthma than White children.

Obesity

Childhood obesity is associated with negative health outcomes later in life, such as cardiovascular disease, high blood pressure, stroke and diabetes. earlier than ever. Type II diabetes, long considered an adult disease, has The adverse health outcomes of childhood obesity are now showing up become increasingly prevalent in children and adolescents.

About Kids brings local communities together to dialogue on children's issues through a diverse increase the voice of those communities in the child advocacy network across Colorado. It's It's About Kids is a project that stimulates develop a legislative agenda for kids and legislative process.

t's About Kids Communities:

Chaffee; El Paso; Fremont; Garfield/Pitkin; La Plata; Larimer; Mesa; Montrose; Prowers/Baca; Pueblo; Routt; and the San Luis Valley

The It's About Kids communities:

- ▷ Develop a steering committee.
- Appoint a local community leader to serve on the statewide advisory committee that helps craft the annual legislative agenda.
 - Develop an e-mail network and disseminate weekly updates and action alerts. Δ
- Generate support for children's issues throughout their community.

The Colorado Children's Campaign encourages conversation and cooperation in communities by providing:

- Weekly legislative updates and action alerts to keep the communities involved and informed during the State Legislative session.
- Local advocacy, data and media workshops.
- Annual It's About Kids advisory committee meetings and monthly conference calls. Δ Δ
- Support for local efforts. ΔΔ

<u>ග</u>

Technical assistance and local data on the status of kids.

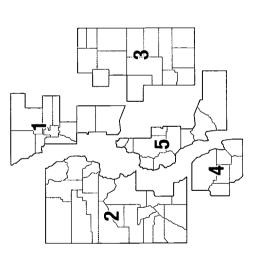

To shine a light on the health and well-being of children throughout Colorado, on the following pages we present data for Colorado's regions and counties.

Sub-state regions are useful in working with child well-being data for sparsely populated areas of the state. They also offer a way to assess a county in terms of its neighbors or to compare one part of the state to another.

Substate Regions

These are informal groupings of counties often used by counties and state agencies.

 Front Range: Adams, Arapahoe, Boulder, Denver, Douglas, El Paso, Jefferson, Larimer, Pueblo, Weld.

2. Western Slope: Archuleta, Delta, Dolores, Eagle, Garfield, Grand, Gunnison, Hinsdale, Jackson, La Plata, Mesa, Moffat, Montezuma, Montrose, Ouray, Pitkin, Rio Blanco, Routt, San Juan, San Miguel, Summit.

 Eastern Plains: Baca, Bent, Cheyenne, Crowley, Elbert, Kiowa, Kit Carson, Lincoln, Logan, Morgan, Otero, Phillips, Prowers, Sedgwick, Washington, Yuma.
 San Luis Valley: Alamosa, Conejos, Costilla, Mineral, Rio Grande,

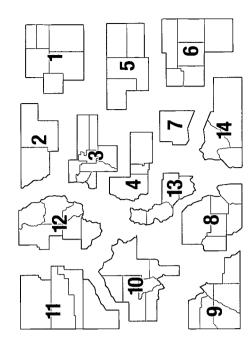

5. Eastern Mountains: Chaffee, Clear Creek, Custer, Fremont, Gilpin,

Huerfano, Lake, Las Animas, Park, Teller.

Saguache.

Planning and Management Regions

This 14-county arrangement, designated by Colorado Executive Orders of November 1972, November 1973, and October 1998, is used for general-purpose planning. This regional configuration is used by agencies such as the Colorado Department of Public Health and Environment and the Colorado Department of Local Affairs.

Population figures (number)

Population by age provided by the Colorado Demography Section, Colorado Department of Local Affairs.

Live births (number)

Live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

WULNERABLE FAMILIES

Single parent families (percent)

children provided by the US Census Bureau, Census 2000 Summary File 1, Families with children headed by a single parent per 100 families with

Births to single women (percent)

Statistics Section, Colorado Department of Public Health & Environment. Births to unmarried women per 100 live births provided by the Health

Births to moms with no high school diploma (percent)

Births to women who have no high school diploma or equivalent degree per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

(rate per 1,000)

(age-specific fertility rate) provided by the Health Statistics Section, Colorado ive births to girls ages 15-17 per 1,000 Colorado female teens of that age Department of Public Health & Environment.

relies on data from federal, state and he Colorado Children's Campaign

reported by place of residence, not place of birth authority relating to the quality of any data. local agencies. These sources are the final Please note that all vital statistics data are or death. Events that occurred in Broomfield County during the period 11/15/2001 - 12/31/2001 have been geographically assigned to Adams, Boulder, or Jefferson County.

Repeat teen births (percent)

Births to women age 19 and younger who had a previous live birth per 100 live births to women age 19 and younger provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Three risk factor births (percent)

Births to unmarried women under 25 years of age with less than a high school education per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Out-of-home placements (rate per 1,000)

Number of children removed from their homes by the Department of Human Services per 1,000 children under age 18 provided by the Child Welfare Services Division, Colorado Department of Human Services. Outofhome placements include family foster care, specialized group homes, residential child care facilities, independent living situations, foster care with relatives, residential treatment centers, detention, legal risk adoptions, medical care, and both emergency and non-emergency placements in receiving or shelters.

FAMILY ECONOMICS

Children enrolled in TANF (rate per 1,000)

Number of children under age 18 receiving Temporary Assistance to Needy Families provided by the Colorado Department of Human Services. The rate is the monthly average number of children receiving TANF during 2001 per 1,000 children. Calculations performed by the Colorado Children's Campaign.

Children under 5 receiving WIC (percent)

Number of infants and children under age 5 receiving services from the Special Supplemental Nutrition Program for Women, Infants, and Children provided by the Colorado Department of Public Health & Environment. The rate is the monthly average number of children served by WIC per 100 children under 5 years of age. **Note:** Some county WIC programs provide services to children from other counties. Gilpin, Hinsdale and Mineral counties do not have a WIC program and children in these counties are served by neighboring counties. Children in Conejos, Costilla, Denver, Mesa, Rio Grande and Weld counties are served both by WIC and CSFP (Commodities Supplemental Food Program), with relatively few being served by WIC.

Shildren qualifying for free or reduced price lunch (percent)

Percent of children in public school who qualify for free or reduced price school lunches in school year 2000-2001 provided by the Colorado Department of Education. Public school children qualify for free lunches if their family's income is less than 130% of the federal poverty level. Public school children qualify for reduced price lunches if their family's income is less than 185% of the federal poverty level.

Median household income (dollars)

Median household income in 1999 provided by the US Census Bureau, Census 2000 Summary File 3, Table P53.

Children in poverty (percent)

Number of children under age 18 living in families with income below the poverty level in 1999 per 100 children living in families provided by the US Census Bureau, Census 2000 Summary File 3, Table P87.

Children under 6 with all parents in labor force (percent)

Number of children under age 6 with all parents (all parents with whom they live) in the labor force per 100 children under age 6 provided by the US Census Bureau, Census 2000 Summary File 3, Table P46.

CHILD AND MATERNAL HEALTH

ow birth weight births (percent)

Babies born weighing 5.5 pounds or less (less than 2500 grams) per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Early prenatal care (percent)

Births in which prenatal care was initiated in the first trimester of pregnancy per 100 live births with known start of prenatal care provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Women smoking during pregnancy (percent)

Births in which women reported smoking during pregnancy on infant's birth certificate per 100 live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment. Please note that this data is most likely underreported on birth certificates across the state due to mothers knowing they shouldn't smoke during pregnancy.

nfant mortality (rate per 1,000)

Deaths during the first year of life per 1,000 live births provided by the Health Statistics Section, Colorado Department of Public Health & Environment.

Child deaths (rate per 100,000)
